Good Morning

Good afternoon

Here we are, it is already late September. Most of us are doing late aeration and preparing the courses for winter. Even knowing that there is still a lot of golf that is ahead of us. For most of us the cool wet summer has been put behind us, and we are having the hot summer days that we expected earlier in the year. It will not be long before the normal days return.

We have 2 events set for October. On October 5th we will have our annual meeting at Berry Hills CC in Charleston. We will be doing several things at that meeting. We will be voting on new board members and still are accepting nomination for new board members. Chase Rogan also has invited Kevin Sunderman to speak, he is on the GCSAA Board of Directors. The topic will be on GCSAA initiatives. Afterwards we will be playing golf, I set out a challenge to all superintendents to win the trophy from me.

Our other event is the Turf Conference at Lakeview in Morgantown, which will be held Oct. 30-31 and Nov 1st. Speakers have been filled. Registration will be sent out soon. I really would like to see all WVGCSA member at the conference.

Thank you,
Tony Coppa, President
Billy Casper Golf

Happy Fall

How many will attend Tuesday, October 31st Banquet ______

Please return to:  WVGCSA
at 2115 Charleston Town Center
Charleston, WV 25389

Registration Breakdown
Advance Registration:
Members:  Number attending entire conference
________ @ $160 = $__________(Includes banquet)

Non -Members:  Number attending entire conference
________ @ $200 = $__________(Includes banquet)

Banquet Only  ________@ $25  = $__________

Daily Fees: Member Price-$80     Non-Member Price-$100
Tuesday Only  ________
Wednesday Only  ________
Make checks payable to WVGCSA Turf Conference
WVGCSA Annual Meeting
Thursday, October 5, 2017
Berry Hills CC, Charleston

9am - Board Meeting
10am - Registration
10:30am - Meeting (education and vote)
11:30am - Lunch followed by golf

Cost: $70 for golf and meeting
$25 meeting only
September’s warm, sunny days and cool nights provide ideal growing conditions for cool-season turf by stimulating photosynthesis and the generation of simple sugars that plants use for growth. Increased production of sugars and reduced energy consumption by plants during cooler weather creates a surplus of sugars. The surplus sugars are stored in the form of simple starches in warm-season grasses or complex carbohydrates in cool-season turf. Plants use the carbohydrates and starches, stored in crown and root tissues as turfgrass plants acclimate for winter, to protect cells from cold temperatures and prolonged periods of ice cover. It is not always easy – especially for facilities that remain busy or are pressured to produce peak conditions late in the season – but do not overlook basic maintenance practices that allow turfgrass plants to take advantage of optimal growing conditions for carbohydrate production.

Basic requirements for optimal fall turf growth and winter acclimation include sunlight, good drainage and sufficient nutrition. Hopefully, drainage issues have been addressed through sound aeration and topdressing practices or the installation of drainage. The nutrient program should also be relatively easy to manage, taking care to keep plants vigorous but not lush and using supplemental applications of potassium to ensure it is readily available in the root zone.

However, the sunlight requirement is of utmost importance to sustain fall growth. Much like solar panels placed in the shade are not very reliable, neither is turf. Shade reduces the efficiency of putting green turf photosynthesis, resulting in a shortage of sugars that act as an energy source for plants. Address shade issues by removing trees that block sunlight. Also, slightly raise mowing heights to increase leaf-tissue surface area and improve the ability of plants to absorb sunlight. Raising mowing heights in small, weekly increments of 0.05 inches will prove beneficial and hardly noticeable to golfers. Final mowing height adjustments can be made during late October, but begin the process of raising mowing heights now to take full advantage of favorable growing conditions.

Many of us also enjoy the coming of fall as it provides a chance to recharge our own batteries after a long season. Put your turfgrass in a position where it too can take advantage of optimal weather and begin acclimating for the winter ahead. Contact your local USGA agronomist if you would like to review your fall and winter maintenance programs. Enjoy the fall season and begin recharging those batteries.

Northeast Region Agronomists:
David A. Oatis, regional director – doatis@usga.org
Adam Moeller, director, Green Section Education – amoeller@usga.org
James E. Skorulski, agronomist – jskorulski@usga.org
Elliott Dowling, agronomist – edowling@usga.org
Addison Barden, agronomist – abarden@usga.org
Paul Jacobs, agronomist – pjacobs@usga.org

Eliminate shade and begin raising mowing heights to maximize sugar production and help plants begin to acclimate for winter.
After more than 25 years serving turf & ornamental markets, you know you can count on Walker Supply Inc.’s **UNSurpassed Service** not only today, but tomorrow.

Budget submissions are right around the corner for many golf facilities. As superintendents and decision-makers work through this process, think about these three considerations:

1. Agronomic programs and maintenance costs are different at every facility. Comparing one facility’s budget to another may be human nature, but it is similar to comparing apples and oranges. Numerous factors such as turf species, soil conditions, course design, equipment fleet and labor force can play a significant role when determining a maintenance budget. The best way to determine if a maintenance budget addresses a particular course’s needs is to track labor and material costs so that the precise cost of a task or area of a golf course is known. Additionally, review current programs to determine if any changes are needed to achieve playability objectives.

2. At nearly every golf facility labor is the largest expense in the maintenance budget. A qualified staff is the most important factor in maintaining excellent playing conditions. However, golf course superintendents report that the current labor shortage remains the greatest challenge facing their day-to-day operation. Productivity can be improved by maintaining fewer acres, purchasing more efficient equipment and eliminating golf course accessories; but ultimately, offering a competitive wage is the most successful strategy to recruit and retain a qualified workforce. Begin planning for this now to minimize future pay increases that are driven by wage competition or regulation.

3. Don’t be hesitant to contract important services that are traditionally performed Internally. Deffering certain cultural and infrastructure projects negatively affects playing conditions and turf health and will also result in higher maintenance costs when the time comes to address those needs. Sometimes it is best to contract a specialist for practices such as fairway cultivation, drainage installation, tree pruning and sod installation to avoid overwhelming current maintenance staff. Contracting temporary labor services for large projects or important events is becoming an increasingly popular strategy to provide the best possible playing conditions.

Northeast Region Agronomists:
David A. Oatis, regional director – doatis@usga.org
Adam Moeller, director, Green Section Education – amoeller@usga.org
James E. Skorulski, agronomist – jskorulski@usga.org
Elliott Dowling, agronomist – edowling@usga.org
Addison Barden, agronomist – abarden@usga.org
Paul Jacobs, agronomist – pjacobs@usga.org

Investing in more productive equipment, like this wide, pull-behind rough mower, is increasingly popular as facilities manage ongoing labor challenges.
Every superintendent needs a good caddie.

Let us try out for the part. We can provide all the supplies you need to keep your course looking its best. And with our knowledgeable staff, we can help you make an ace.

Best Sand. Best selection. Best support.

Best Sand has long been one of the best known names in golf maintenance. With the legendary quality and playability of our bunker sands, golf mixes, topdressing sand and construction mixes, it's easy to see why. Now all the people and products of Best Sand have yet another club in their bag: the superior service and consistent support of the Fairmount Sports + Recreation team. And now more than ever, you're the winner.
